

HS Holzexport Schuster present at Progetto Fuoco 2020

On 22th february 2020 the 10th edition of Progetto Fuoco at Verona was terminated successfully. Down under you find some pics of our stay at one of the most important fairs of this sector all over Europe.

We'd like to thank all the visitors that came to our stand for the interest demonstrated in our product, a completely natural pellet, produced from 100% sawdust.

Using Schuster pellets is not only convenient, safe, eco-friendly and therefore an advantage for all our health, but on the top of it, it also cost-saving.

Why all these advantages?

- **Because it is a short-term, renewable energy that can directly be related to long term advantages**
- **Because due to the the CO²-neutrality of Schuster pellets, using them can contribute notably to the reduction of the greenhouse-effect**

Why the cost-saving?

- Because the costs for heating with Schuster-Pellets are, despite the low oil-prices, significantly lower than oil or gas:
- GPL GAS* = €240,00/MWh
- OIL* = €127,00/MWh
- METHANE* = €80,00/MWh
- **PELLETS SCHUSTER = €66,00/MWh**

*indicated prices refer to actual prices on the Italian market

SCHUSTER - GUARANTEE OF QUALITY SINCE 1933!
